Austin-Smith:Lord were appointed by Urban Splash in 2016 to design and deliver the Landscape Design for Phase 2 of the Park Hill project, working closely with London based architects Mikhail Riches.

Built between 1957 and 1961 by Sheffield City Council to replace slum terraces, Park Hill is one of the most ambitious and iconic developments of its type, famous for its 'streets in the sky'. The building covers an area of 17 acres and contained around 1,000 flats. In total the whole estate covers 32 acres.

Phase 2 is the continuation of Urban Splash's redevelopment of the estate which began in 2007, following decades of decline. It will provide 200 new homes and around 2,000m2 of mixed use commercial space, including offices, retail and cafes.

Much of the original iconic landscape infrastructure is still present and in redeveloping the landscape a light touch will be employed, respecting and working with existing terrace levels and retaining as much of the original retaining wall infrastructure as possible, stripping away the tired 1980s and 90s interventions.

The scheme includes comprehensive Public Realm improvements, creation of shared surface access routes, reorganising car parking, and the creation of a resident's courtyard garden.
